DESCRIPTION

This book provides a new, powerful twist to MIDAS technical analysis, a trading method developed by the late Paul Levine. The authors show how to employ MIDAS in trading, from recognizing set ups to identifying price targets. The book explains the basics of MIDAS before demonstrating how to apply it in different time frames. Further, it extrapolates how MIDAS can be used with other more conventional indicators, such as DeMark or moving averages. In addition to introducing new indicators that the authors have created, the book also supplies new computer codes.

ABOUT THE AUTHOR

Andrew Coles, PhD, is an active trader running a private investment fund. He has a diploma in technical analysis from STA–UK and from the International Federation of Technical Analysts (IFTA). He is also a Certified Financial Technician (CFTe). He holds a master's and a doctorate and was a Postdoctoral Research Fellow of the British Academy. During his graduate and postdoctoral years, he worked at a number of institutions, including King's College (KQC) London, the Institute of Classical Studies, and Oxford University. He is the author of a previous book on the history and philosophy of science.

David G. Hawkins is a successful full-time trader. He holds an MS in physics from Brown University, has taught physics at Roger Williams University, and has designed optical and ultrasound components for graphics, medical, and telecom systems. He presents on MIDAS and other technical analysis topics at AAII conferences.
