**DESCRIPTION**

The new edition of this practice-oriented handbook features thoroughly updated contents, including recent developments in parallel synthesis.

A new chapter on screening complements the overview of combinatorial strategy and synthetic methods.

"Experimental details and complete reaction data [...] are a constant theme running through this work"

(Angewandte Chemie)

"Recommended to newcomers in the field of combinatorial chemical synthesis because of its broad scope"

(Journal of the American Chemical Society)

---

**ABOUT THE AUTHOR**

Willi Bannwarth is full Professor for Organic Chemistry at the Albert-Ludwigs University Freiburg (Germany). Having studied Chemistry in Münster and Konstanz, he worked as a postdoctoral fellow with Sir A. Battersby in Cambridge (UK). In 1979, he joined Roche in Basel (Switzerland) where he was head of nucleotide and peptide chemistry and later was named head of combinatorial chemistry, a technique which he had introduced at Roche. In 1996 he moved to Byk Gulden Pharmaceuticals...
(now Altanapharma) in Konstanz to build a combinatorial chemistry facility there. In 1999 he was appointed professor for Organic chemistry at the University of Freiburg where he focuses on combinatorial and bioorganic chemistry.
