The Power of Functional Resins in Organic Synthesis
Fernando Albericio (Editor), Judit Tulla-Puche (Editor)

DESCRIPTION
While many books cover solid phase synthesis and combinatorial synthesis, this one is unique in its exclusive coverage of the other aspects of solid-phase synthesis. As such, it contains everything you need to know -- from supported reagents, to scavengers, resins, and the synthesis of biomolecules and natural products.

An invaluable companion for all chemists and biochemists working in university research and industry.

ABOUT THE AUTHOR
Judit Tulla-Puche is a senior scientist at the Institute for Research in Biomedicine in the group of Professor Fernando Albericio. She received her Ph.D. in chemistry at the University of Minnesota under the supervision of Professor George Barany, and then moved to the Barcelona Science Park. Her research efforts are directed at the synthesis of cyclic peptides and depsipeptides with anticancer activity, and the development of drug delivery methodologies.

Fernando Albericio is the Executive Director of the Barcelona Science Park, Professor at the University of Barcelona, and group leader at the Institute for Research in Biomedicine. His major research interests cover practically all aspects of peptide synthesis and combinatorial chemistry methodologies, as well as synthesis of peptides and small molecules with therapeutic activities.
He has published over 500 papers and is currently editor of Amino Acids and the International Journal of Peptide Research and Therapeutics.
