DESCRIPTION

Written by world-class authors, this most recent major book on the topic highlights new and current trends as well as future directions. It is comprehensive in its scope, covering all aspects of gold chemistry -- from homogeneous to heterogeneous catalysis, from supramolecular assemblies to sensors and medicinal applications. The result is an invaluable work for both organic and inorganic chemists working in universities and industry, as well as material scientists.

ABOUT THE AUTHOR

Fabian Mohr is assistant professor ("Juniorprofessor") at the University of Wuppertal in Germany. He obtained his chemistry honours degree from RMIT University in Melbourne, Australia, where he also completed his PhD on an Australian Government Scholarship under the guidance of Suresh Bhargava and Martin Bennett from the Australian National University. Postdoctoral appointments led him to work with Richard Puddephatt (University of Western Ontario, London, Canada) and Andrei Vedernikov (University of Maryland, College Park, USA). In 2004 he accepted a research grant from the Spanish Government to work with Mariano Laguna in Zaragoza. Upon completion of his contract in Zaragoza, he was appointed visiting professor at the University of Burgos before he took up his current position in Wuppertal in October 2006. In October 2007 Fabian spent two months as visiting professor at the University of Vienna in the group of Bernhard Keppler. Fabian has authored more than 35 papers and reviews,
most of them on various aspects of gold chemistry. Outside the laboratory, Fabian is an accomplished harpsichordist and organist, specializing in historic performance practices and performing regularly both as soloist and with ensembles.
