DESCRIPTION

The only book to present the synergy between modeling and simulation, systems engineering, and agent technologies expands the notion of agent-based simulation to also deal with agent simulation and agent-supported simulation. Accessible to both practitioners and managers, it systematically addresses designing and building agent systems from a systems engineering perspective.

ABOUT THE AUTHOR

Levent Yilmaz is assistant professor of computer science and software engineering at the College of Engineering, Auburn University, USA. Before joining the faculty in 2003, Professor Yilmaz worked as a senior research engineer in the Simulation and Software Division of Trident Systems, Inc., where he held the position of a lead project engineer and principle investigator for advanced simulation methodology, model-based verification, and simulation interoperability efforts. Professor Yilmaz received his Ph.D. and M.S. degrees from the Virginia Polytechnic Institute and State University, Blacksburg, USA.

Tuncer I. Ören is professor emeritus of computer science at the School of Information Technology and Engineering (SITE) of the University of Ottawa, Canada, where he held a chair as full professor from 1981 to 1996. Professor Ören's research interests focus on the topics of modelling and simulation, agent-directed simulation, cognitive simulation, reliability and quality, and ethics in simulation. He has published over 300 papers and several books.
