DESCRIPTION

This is the only up-to-date book on the market to focus on the synthesis of these compounds in this particularly suitable way. A team of excellent international authors guarantees high-quality content, covering such topics as monodisperse carbon-rich oligomers, molecular electronic wires, polyaromatic hydrocarbons, nonconjugated small molecules, nanotubes, fullerenes, polyyynes, macrocycles, dendrimers, phenylenes and diamondoid structures.

The result is a must-have for everyone working in this expanding and interdisciplinary field, including organic and polymer chemists, materials scientists, and chemists working in industry.

ABOUT THE AUTHOR

Michael M. Haley received both his BA (1987) and PhD (1991) degrees from Rice University. After postdoctoral work at the University of California, Berkeley (1991-93), he joined the faculty at the University of Oregon (1993) and is now Professor of Chemistry and member of the Materials Science Institute. Haley is author of 80+ publications and his research interests span a variety of carbon-rich systems, from metalla-aromatics to molecules based on phenyl-acetylene scaffolding.

Rik R. Tykwinski received his BS degree from the University of Minnesota-Duluth and his PhD from the University of Utah. After postdoctoral studies at the Swiss Federal Institute of Technology (ETH), Zürich (1994-97), he joined the faculty of the University
of Alberta in 1997 and is now Professor of Chemistry. He has published over 85 research papers, most of which describe the synthesis and unique properties of carbon-rich acetylenic molecules.
